

Create a widget for displaying posts with lightbox and load more functionality.

Design & Prototype link:

<https://www.figma.com/proto/sMOQbcnymnnqcjfsdDgy81/TASK-Frontend?node-id=29%3A200&scaling=contain>

Description:

On the page load, display the first four posts from the JSON file (data.json - included in the challenge folder), and with the load-more functionality (Load More button), load another four posts, and so on, until all the posts are displayed. When all the posts are shown, and there are no more posts left to be loaded, hide the Load More button.

The widget should be responsive, on mobile (<768px) display the posts in one column, on tablets (<992px) in two columns (as they are in the prototype), and on desktop (>992px) in four columns.

The posts should be clickable, and on click, show a modal with the post info, as provided in the design link (try clicking on the first post of the prototype).

For this challenge, you should only use vanilla javascript and your own CSS. Don't use jQuery or CSS frameworks. All icons are inside the icons folder.

*Partial solutions of the project are accepted as well, so share any progress you make.

*A git repository with full commit history is expected to be part of the delivered solution
